Milwaukee deploys Wi4Net citywide surveillance network

Wi4Net, a division of CelPlan Technologies, and a provider of integrated wireless video surveillance solutions, and Pivot3, Inc., the inventor of high-definition storage based on distributed RAID, have announced that the city of Milwaukee has chosen Wi4Net for the provisioning and deployment of wireless surveillance cameras and a network monitoring facility.

The first phase of the project includes a wireless 4.9 GHz-based backhaul network throughout the city's 250sq kms. Initially connecting 15 cameras, the network is designed to scale to more than a hundred cameras in the future. Video is streamed to a centralised monitoring centre, including a scalable storage solution from Pivot3 equipped with 18 terabytes of raw storage capacity.
